Terminology map

If you are familiar with another reporting tool, the words you use to refer to reporting concepts may be different from the words used in Actuate documentation. To help you make the transition, this table lists some important terms from the world of reporting and gives the equivalent Actuate terminology.

Reporting term	Actuate term
attribute	property
auto arrange	space evenly
break group	group
break report	grouped report
browser	web browser
calculated field	calculated control or computed field
criteria	parameters
detail section	detail frame or innermost frame
Expert	wizard
field	column or control
footer	page footer
formula	expression
Formula Editor	Expression Builder
group field	group key
Group Footer	After
Group Header	Before
group level	group
groups/totals report	grouped report

Reporting term	Actuate term
header	page header
layout painter	Design Editor
level break listing	grouped report
link	join
link field	key
live header	Before
matrix report	crosstab report
N-up report	multi-column page layout
on-demand subreport	demand paging
parameter field	ad hoc parameter or static parameter
property sheet	Properties tab in Component Editor
region	frame
repeating frame	detail frame or innermost frame
report	e.report
Report Footer	After
Report Gallery	Create New Report dialog
Report Header	Before
report painter	Design Editor
request	query
section	frame
select painter	Query Editor
selection formula	parameter
setting	property
shortcut menu	context menu
sort-and-group-by field	group key
sort field	sort key
summary	aggregate row
two pass formula/function	lookahead aggregate
underlay	watermark
verify	synchronize query
x-axis	x-axis or category axis
y-axis	y-axis or value axis

absolute cell reference

A cell reference that points to an exact location on an Actuate e.Spreadsheets Designer worksheet. When an e.Spreadsheets cell containing an absolute reference is moved or copied, it always continues to refer to the originally referenced cells.

Related terms

Actuate e.Spreadsheets Designer
cell
cell reference

Contrast with

external cell reference
relative cell reference

abstract base class

In Actuate e.Report Designer and Actuate e.Report Designer Professional, a class created to organize a class hierarchy or define methods and variables that apply to derived classes. An abstract base class is one for which instances cannot be created.

Related terms

base class
class
class hierarchy
method
variable

Contrast with

concrete base class

abstract data type

See user-defined data type.

Abstract Window Toolkit (AWT)

A set of components used for developing Java™ graphics applications. The Swing component architecture extends this toolkit.

Related terms

Swing component architecture

Java

access control list (ACL)

A list of security IDs for an item in a Report Encyclopedia volume. If a security ID in the access control list matches any user ID, the page on which that item appears is accessible to the owner of that user ID.

Related terms

page

Actuate Page Level Security Option

Report Encyclopedia volume

security ID

Contrast with

privilege

Active Portal

See Actuate Active Portal.

active request

A task currently eligible for execution on a server. An active request begins to run when a Factory process becomes available.

Related terms

Factory process

request

Contrast with

job

Active Server Page (ASP)

A web server technology developed by Microsoft Corporation that supports creation of dynamic, interactive sessions. The technology contains both HTML and embedded programming code written in VBScript or JavaScript.

Related terms

hypertext markup language (HTML)

JavaScript

Contrast with

JavaServer Page (JSP)

ActiveX

See Actuate ActiveX Control.

Actuate Active Portal

A JavaServer Page technology that uses industry standard tools such as JavaScript and JavaServer Page tags to support accessing reports on the web. These reports are stored in a Report Encyclopedia volume on an Actuate e.Reporting Server.

Related terms

Actuate e.Reporting Server
JavaServer Page (JSP)
JavaScript
Report Encyclopedia volume

Contrast with

Actuate ReportCast technology

Actuate Active Portal Security Extension (APSE)

An application programming interface that supports the use of third-party security tools. The tag library supports customization of the user authentication process. This API is part of Actuate e.Reporting Server Integration Technology.

Related terms

Actuate e.Reporting Server Integration Technology
Application Programming Interface (API)

Contrast with

Actuate ReportCast Security Extension
Actuate Report Server Security Extension API

Actuate ActiveX Control

An integration technology used to embed Actuate reporting functionality into custom applications. For Actuate e.Reporting Suite 6, Actuate ActiveX Control is part of Actuate Basic Client Integration Technology. For Actuate e.Reporting Suite 5, this technology was part of Actuate e.Report Designer Professional.

Related terms

Actuate Basic Client Integration Technology
Actuate e.Report Designer Professional
application

Contrast with

Actuate e.Reporting Server Integration Technology

Actuate Administrator Desktop

A release 5 and earlier product used to manage Actuate e.Reporting Server. In release 6, Actuate Management Console replaces this product.

Related terms

Actuate e.Reporting Server
Actuate Management Console (AMC)

Actuate Advanced e.Reporting Server

See Actuate e.Reporting Server and Actuate Page Level Security Option.

Actuate Archive Driver API

An API that provides an interface between Actuate e.Reporting Server and third-party archive software. This API also supports the use of third party archiving hardware. For Actuate e.Reporting Suite 6, this technology is part of Actuate e.Reporting Server Integration Technology. For Actuate e.Reporting Suite 5, this technology was part of Actuate e.Report Designer Professional.

Related terms

Actuate e.Report Designer Professional

Actuate e.Reporting Server

Actuate e.Reporting Server Integration Technology

Application Programming Interface (API)

Contrast with

Actuate Software Development Kit (SDK)

Actuate Basic

A programming language that is syntax-compatible with Microsoft Visual Basic 3.0. Actuate Basic consists of standard Basic functions and statements, plus object-oriented language extensions. Report developers can write Actuate Basic code to go beyond what can be accomplished with the Actuate e.Report Designer Professional interface. Both Actuate e.Report Designer and Actuate e.Report Designer Professional use and run Actuate Basic code though only Actuate e.Report Designer Professional supports programming with Actuate Basic.

Related terms

Actuate e.Report Designer

Actuate e.Report Designer Professional

function

object-oriented programming

statement

Contrast with

Actuate Foundation Class (AFC) Library

Actuate Basic and Actuate e.Report Designer Java Edition Option

An Actuate e.Reporting Server option that provides base report server capabilities including running, storing, and managing reports created using Actuate e.Report Designer, Actuate e.Report Designer Java Edition, and Actuate e.Report Designer Professional. Other Actuate e.Reporting Server Options include Actuate e.Analysis Option, Actuate e.Spreadsheets Option, Actuate Multi-Application Option, and Actuate Page Level Security Option.

Related terms

Actuate e.Report Designer Professional
Actuate e.Reporting Server

Contrast with

Actuate e.Analysis Option
Actuate e.Spreadsheets Option
Actuate Multi-Application Option
Actuate Page Level Security Option

Actuate Basic Client Integration Technology

A set of application programming interfaces that extend the functionality of Actuate e.Report Designer Professional. The products include Actuate ActiveX Controls, Actuate Requester API, and Actuate Search Extension API. Actuate Requester API is also part of the Actuate e.Reporting Server Integration Technology.

Related terms

Actuate ActiveX Control
Actuate e.Report Designer Professional
Actuate Requester API
Actuate Search Extension API
Application Programming Interface (API)

Contrast with

Actuate e.Reporting Server Integration Technology

Actuate Basic data type

See data type.

Actuate e.Analysis Option

An application that enables users to analyze search results in an e.report written in dynamic hypertext markup language (DHTML). The analysis tool is a Java applet that works with Actuate Basic reports only. This tool is available as an additional purchase with Actuate e.Reporting Server and e.Report Option: Actuate Basic and Actuate e.Report Designer Java Edition Option.

Other Actuate e.Reporting Server Options include Actuate e.Spreadsheets Option, Actuate Multi-Application Option, and Actuate Page Level Security Option. Actuate e.Analysis Option does not work with Actuate e.Report Designer Java Edition reports. In addition, Actuate e.Analysis Option does not work with Actuate e.Spreadsheets Designer worksheets.

Actuate e.Reporting Server

A set of cooperating processes functioning as a standalone report server or a cluster of report servers that manage information and service requests from users. For example, an Actuate e.Reporting Server provides scheduling, report generation of Actuate and third party reports, printing, and notification. There are several options that provide additional functionality for Actuate e.Reporting Server. These options require purchase separate from Actuate e.Reporting Server. The options include Actuate Basic and Actuate e.Report Designer Java Edition Option, Actuate e.Analysis Option, Actuate e.Spreadsheet Option, Actuate Multi-Application Option, and Actuate Page Level Security Option. Use Actuate e.Reporting Server Integration Technology to extend Actuate e.Reporting Server functionality.

Actuate e.Reporting Server Integration Technology

In release 6, these tools form part of Actuate's extensive integration technology. Other integration technologies include Actuate Basic Client Integration Technology, Actuate e.Report Designer Java Edition Engine, and Actuate e.Spreadsheet Designer Engine.

- Actuate archive driver supports the use of third party archiving software and hardware.
- Actuate Information Delivery API uses XML technology and conforms to the SOAP specification. This API provides full programmatic access to Actuate e.Reporting Server. That API also provides support for clusters,

multiple-applications, and other functionality currently unavailable in the Report Server API.

- An Actuate e.Reporting Suite 5 technology, Actuate Report Server API implements common Report Encyclopedia volume tasks, integrates report server features into existing corporate applications, automates routine or time-consuming tasks, and implements new feature groupings for custom business processes. Access the report server API using C++. The Information Delivery API includes the same functionality but uses more current XML technology that conforms to the SOAP specification.
- Actuate Report Server Security Extension supports the use of third party security tools.
- Actuate Requester API accesses attributes and values of report parameters, changes the values of report parameters, controls how and when an e.report is generated, displays and prints reports, and configures report print setup. Access Actuate Requester API using Actuate Basic, C, C++, Progress 4GL, and Visual Basic. Actuate Requester API is also part of the Actuate Basic client Integration Technology.

cell reference

An address, defined by letter and number, that locates a cell or a range of cells in an Actuate e.Spreadsheet Designer worksheet. The reference has four parts: workbook name, worksheet name, row, and column. The worksheet, if omitted, defaults to the worksheet in which the reference is used. The workbook, if omitted, defaults to the workbook in which the reference is used. A cell reference can be absolute, external, or relative.

character set

A mapping of specific characters to code points. For example, in most character sets the letter A maps to the hexadecimal value 0x21.

Related term

code point

Contrast with

locale
locale map

chart

A graphic representation of data or the relationships among sets of data. Actuate Basic products also use graph functionality. Beginning with Actuate e.Reporting Suite 6, the preferred functionality is chart. Each of the designer tools provides different charting capabilities. Consult the documentation for each product. Consult the Upgrading Guide for information about how to modify graphs to take advantage of new chart capabilities.

Related term

data

Contrast with

graph

class

1 A set of methods and variables implemented in Actuate Basic that defines the characteristics of an object. All objects of a given class are identical in form and behavior, but contain different data in their variables.

- 2** A set of methods and variables implemented in Java that defines the characteristics of an object used by Actuate e.Report Designer Java Edition and Actuate e.Spreadsheet Designer.

cluster

A group of active Actuate e.Reporting Servers on the same IP backbone. Actuate e.Reporting Suite 6 architecture supports multiple machines working together as a single system image. This technology is also known as the Distributed Actuate e.Reporting Server System.

Related terms

Actuate e.Reporting Server
cluster framework
cluster master
cluster member

cluster framework

An architecture that supports the formation and management of a cluster of Actuate e.Reporting Servers. The framework supports:

- process management such as starting and stopping servers within the cluster.
- load balancing among servers that are members of a cluster.
- membership management. Membership management includes cluster formation, regrouping cluster members, detecting server heartbeats, and implementing failover rules for failed cluster members.

Related terms

Actuate e.Reporting Server
cluster
cluster member
process

Contrast with

cluster master

cluster master

An Actuate e.Reporting Server that has management responsibility for a cluster. The cluster master:

- manages cluster operations such as cluster formation, adding or removing individual servers from a cluster, and regrouping cluster members
- owns the cluster configuration file, which indicates the services running on each member of the cluster
- implements failover rules for a failed cluster member

Related terms

locale map

Color Chooser

- 1 A tool in Actuate e.Report Designer and Actuate e.Report Designer Professional that specifies colors for parts of the report such as control backgrounds, fonts, frame backgrounds, and lines. Use the Builder button in the Properties page of the Component Editor to access the Color Chooser.

- 2 A tool in Actuate e.Report Designer Java Edition that specifies colors for parts of the report such as charts, control backgrounds, fonts, lines, and zone backgrounds. To access this tool, use the color swatch in Common Properties. For background colors, there is an option to set the color to transparent.

- 3 In Actuate e.Spreadsheet Designer, a palette of available colors for borders, fonts, and fills used to format cells and chart elements. The automatic option directs the spreadsheet to choose colors based on context. For example, each chart series would have a different color chosen.

combo box

A control that functions as a text box and list box combined. To use a combo box, type a value or select an item from a list.

command

- 1 A user-initiated action request that takes the form of a name and parameters that can be performed by an application.
- 2 In Actuate ReportCast, commands are part of the scripting language. These commands are embedded in the HTML comments of the Actuate ReportCast template file. The command tells ReportCast how to generate a web page. Scripting language commands use this format:

<!-- #Actuate <directive> [options] -->

For example:

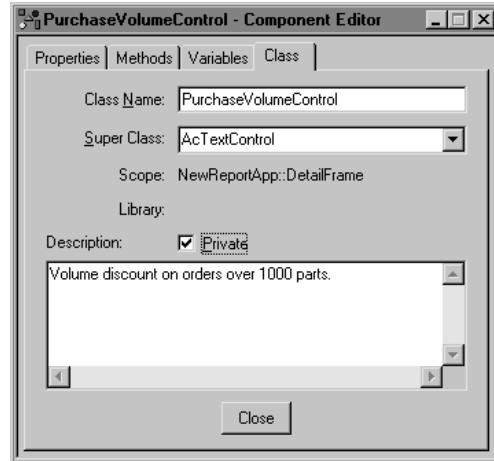

<!-- #Actuate list members (roles) -->

comment

- 1 In Actuate e.Report Designer and Actuate e.Report Designer Professional, text on the Class page that documents the purpose of a component.

- 2 Text written in Actuate Basic or Java to describe your code or your work. Each comment line starts with a single quotation mark or the keyword REM followed by a space.

```
GetUserLevel (username$, password$, requestedFunction%) As Boolean  
'  
' Functional Description:  
'  
' This function is called at runtime to determine the user's privilege level  
' by looking the user up in the db \\local\dbusers, verifying that the  
' password matches, and returning True or False for the requested task  
'
```

- 3 Text written in Java code to describe other lines of code or your work on the code. Each line of the comment begins with two forward slash characters. A block of comments begins with a forward slash and an asterisk and ends with an asterisk and a forward slash.

component

- 1 In Actuate e.Report Designer and Actuate e.Report Designer Professional, a building block used to construct a report design. Components are representations of Actuate Foundation Classes. Components have properties and methods that define their appearance and behavior. One component can be based on or derived from another component. All components derive from AcComponent, the principal base Actuate Foundation Class. For modification and reuse, group components and store in a library.

- 2** A building block used in Actuate e.Report Designer Java Edition to construct a report template. Components have properties that define their appearance and behavior. Components can be simple controls such as data fields, formula controls, labels, and lines. The simple controls are contained in a zone. Components can also be complex items such as asynchronous grids, charts, and crosstab reports. Complex components such as asynchronous grids and crosstab reports can span multiple zones.

connection

- 1 A communication link with a database or other data source. For example, a type of URL used to connect an Actuate e.Spreadsheet Designer workbook to a database. For example, a connection links a JDBC data source to Actuate e.Report Designer Java Edition.
- 2 In Actuate e.Report Designer and Actuate e.Report Designer Professional, a component that establishes a link with a database. Actuate e.Report Designer and Actuate e.Report Designer Professional provide several standard connection types, DB2, Informix, Microsoft SQL Server,

ODBC, Oracle, Progress 8, Progress 9, and Sybase. There are two types of e.reports for which you do not need to define a connection. The first is a subreport that shares a connection with another report. The second is a report that does not get data from a database. For this type of report, you must create a custom data stream. The relevant Actuate Foundation Classes are AcDB2Connection, AcInformixConnection, AcMSSQLConnection, AcODBCConnection, AcOracleConnection, AcProgressConnection, AcProgressSQL92Connection, and AcSybaseConnection.

See Actuate End User Desktop.

engine

- 1 In Actuate e.Report Designer Java Edition, a tool that generates a report for viewing. The engine follows the instructions in a report template design (.jod) file to generate a report in the format specified by the user.

The engine is also deployable in user applications. Using that functionality requires specific licensing of the e.Report Designer Java Edition engine.

- 2 In Actuate e.Spreadsheets Designer, an API driven developer tool used to build a processor. The developer has flexibility to mix any third party tool to gather, calculate, and process data and pass it between the data source and the e.spreadsheets. The typical use is in specialized executable applications.

Using the engine functionality requires specific licensing of the Actuate e.Spreadsheets Designer engine.

extensible markup language (XML)

XML is an interface layer or wrapper for data being passed among data sources so a wide variety of applications, legacy systems, and databases can exchange information. XML organizes data into a strictly defined structure to facilitate that data exchange. XML is content-oriented rather than format-oriented. The W3C direction is to create a schema specification that provides a way to determine whether the content of an XML document is valid and an XML query specification that provides a language for searching data repositories. Vertical industry flavors of XML are developing to support interoperability of Business to Business (B2B) software. For example, ebXML (electronic business XML) is a modular suite of specifications that provides a horizontal messaging framework. Other examples of emerging cross-industry standards include XSL (extensible stylesheet language), CIDEX (Chemical Industry Data Exchange), IFX (International Financial Exchange), and UBL (Universal Business Language).

XML documents must be well-formed. Briefly, well-formed means a document must contain one or more elements and that the root element must contain all the other elements. Each element must nest inside any enclosing elements following the syntax rules.

Related terms

data
extensible stylesheet language (XSL)
World Wide Web Consortium (W3C)
XML report

Contrast with

extensible stylesheet language transformations (XSLT)
hypertext markup language (HTML)

extensible stylesheet language (XSL)

A language defined in a W3C specification that expresses how to format, lay out, and paginate in a presentation medium such as a window in a web browser or a page in the printed document. XSL uses two processes: transformation and formatting. Using two processes supports differentiation between the structure of the result tree and the structure of the source tree. XSL stylesheet language typically derives from XML. Because XML contains no presentation information without using a stylesheet, the processor renders the XML content as an undifferentiated string of characters.

Related terms

extensible markup language (XML)
extensible stylesheet language transformations (XSLT)
web browser
World Wide Web Consortium (W3C)

Contrast with

hypertext markup language (HTML)

extensible stylesheet language transformations (XSLT)

A transformation language for manipulating and formatting XML documents and turning them into other XML, HTML, or text-based document formats. XSLT can be read by XSLT processors which use a stylesheet that specifies the rules to apply.

Related terms

extensible markup language (XML)
extensible stylesheet language (XSL)

extensible stylesheet language transformations stylesheet (XSLT stylesheet)

A document that specifies the rules to transform a particular XML document. All XSLT stylesheets are XML documents and should be well-formed XML. A well-formed XML document follows syntax rules established in the XML 1.0 recommendation. Well-formed means a document must contain one or more elements and that the root element must contain all the other elements. Each element must nest inside any enclosing elements following the syntax rules.

Related terms

IME file

See Input Method Editor (IME) file

implicit declaration

A variable declaration in an assignment statement rather than in the Dim, Global, or Static statements. Implicit declaration is supported in Visual Basic, but not in Actuate Basic. All declarations in Actuate Basic are explicit.

Related terms

declaration

statement

variable

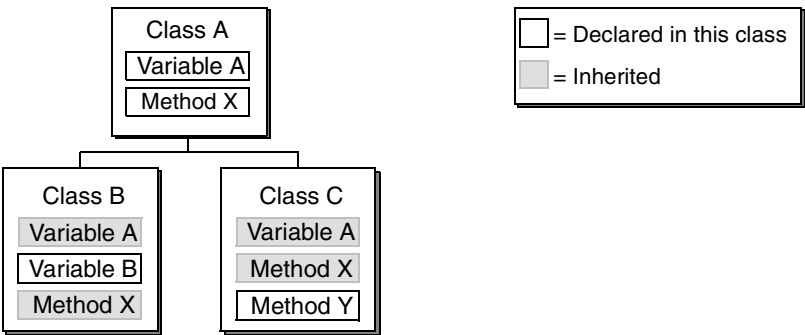

imported object

See object linking and embedding (OLE).

Information Delivery API

See Actuate Information Delivery API.

inheritance A mechanism whereby one class of objects can be defined as a special case of a more general class and automatically includes the method and variable definitions of the general class, known as a base or superclass. The superclass serves as the baseline for the appearance and behavior of the derived class, or subclass. In the subclass, the appearance and behavior can be further specialized without affecting the superclass. There are two kinds of inheritance: single inheritance and multiple inheritance. Typically, a subclass augments or redefines the behavior and structure of its superclass or superclasses.

Related terms

- base class
- class
- derived class
- method
- multiple inheritance

- cube

inner join A type of join that returns records from two tables based on their having specified values in the join fields. The most common type of inner join is the equijoin, in which records are combined and returned based on field values being equal. For example, if customer and order tables are joined on customer

ID, the result set will contain only combined customer and order records where the customer IDs are equal.

Related term

join

Contrast with

outer join

Input Method Editor (IME) file

A Java class file which sets the keyboard mapping for a character set. Place the IME file in the jre\lib\ext directory to make it accessible to the Java environment.

Related terms

character set

class

Java

input object A parameter passed to a request.

Related terms

scope

The parts of a program in which a symbol or object exists or is visible. The scope of a program element is determined by where the element is declared. The global scope in an Actuate Basic program holds all global variable, function, and class names. Scopes can be nested. For example, a function introduces a new scope for its parameters and local variables. As another example, a class introduces a scope for its member variables, member functions, and nested classes. Code in a method in one scope has visibility to other symbols in that same scope, and, with certain exceptions, to symbols in outer scopes.

Related terms

Actuate Basic
class
function
object
variable

Contrast with

scope resolution operator

scope resolution operator

This operator, ::, refers to symbols in a different scope. A leading :: refers to the global scope. For example, CustomerFrame::CustId refers to the control CustId within the scope of the frame, Customer Frame. This control is different from TotalsFrame::CustId which is scoped to Totals Frame.

Related terms

operator
scope

search expression

The use of special characters to match patterns in the value fields in the search frame. The special characters used in search expressions are the backslash (\), the question mark (?), the pound sign (#), the asterisk (*), and the brackets ([]). Some nonprinting ASCII codes are represented by character pairs that begin with the backslash (\a, \b, \t, \n, \f, and \r). The special characters and examples of their use include the following.

Special characters	Definition
\	Escape next character (one- or two-byte character)
?	Match any one character (one- or two-byte character)
#	Match any ASCII numeric character [0-9]
*	Match zero or any number of character(s)
\a	Match one alarm (0x07)
\b	Match one backspace (0x08)
\t	Match one tab (0x09)
\n	Match one new line (0x0a)
\f	Match one form feed (0x0c)
\r	Match one carriage return (0x0d)
\\	Match one backslash (\)
[]	Match zero characters (ignored)
[characterlist]	Match any one character inside the brackets
[a-z0-9]	Match any lowercase or ASCII numeric character
[a-z-]	Match any lowercase character or hyphen (-)
[^a-z0-9]	Match any character other than lowercase or ASCII numeric

Special characters	Definition
[^] or "\^"	Match one caret (^)
[?] or "\?"	Match one question mark (?)
[#] or "\#"	Match one pound sign (#)
[*] or "*"	Match one asterisk (*)
[[] or "\["	Match one open bracket (()
[]] or "\]"	Match one closed bracket (])
["\[\"-\"\\"]	Match any ASCII character code between [and]
["\1"-"\\377"]	Match any octal character excluding NUL (0x00)
["\x100"-"\\xffff"]	Match any hexadecimal character

write privilege

security ID

An identifier such as a user name, an assigned name, or a security role that is specified in an Actuate Basic report by the report designer to restrict or support access to report components using an access control list (ACL).

Related terms

Actuate Basic
access control list (ACL)
report
security role
user name

security role

A name for a set of privilege levels. An administrator who assigns security roles to users defines privileges.

Related terms

administrator

privilege

select

- 1 To choose one or more items. A user-driven operation then affects the selected items.

- 2 To choose an option button, check box, or list item in a dialog box.

SELECT

See SQL SELECT statement.

semantic type

Information that can be used to determine what data type an element is. For example, a semantic type is AC_SEMANTIC_TYPE_OBJECT_ID. A comparable data type is AcProperty::STRING.

Related term

data type

sequential section

In Actuate e.Report Designer Professional, a section that contains several frames, subreports, or other sections that display or print in a specified order.

Related terms

Actuate e.Report Designer Professional

frame

section

subreport

Contrast with

conditional section

group section

parallel section

report section

server application

An application that furnishes data in response to a request from a client application. A server is often located on a computer other than the client.

Related terms

application
client/server
request

Contrast with

Actuate e.Reporting Server

server processes

A set of cooperating processes that constitute an Actuate e.Reporting Server. The server processes are Encyclopedia, Factory, Process Manager, and View.

Related terms

Actuate e.Reporting Server
Encyclopedia process
Factory process
Process Manager
View process

Contrast with

service

service

A related set of server functionality that can be enabled or disabled. For example the View service displays report document information in DHTML, XML, PDF, and other formats. The available services are Encyclopedia, Factory, Message Distribution, and View.

Related terms

Encyclopedia service
Factory service
Message Distribution service
View service

Contrast with

Actuate e.Reporting Server

servlet

A small Java application running on a web server to extend the server's functionality. The servlet usually displays a dynamically generated page in a browser and interacts with the user.

Related terms

application
browser
Java
page
web server

SGML (standard generalized markup language)

See standard generalized markup language (SGML).

Simple API for XML (SAX)

An application programming interface for accessing the contents of an XML document. SAX does not provide random access lookup to the document contents. It scans the document sequentially and presents each item to the application only once. If the application does not save the data, that data is no longer available.

Related terms

application

Application Programming Interface (API)

extensible markup language (XML)

Contrast with

document object model (DOM)

simple object access protocol (SOAP)

A message-based protocol based on extensible markup language. Use the SOAP protocol to access applications and their services on the web. SOAP employs XML syntax to send text commands across the internet using HTTP. SOAP can also be used to implement a messaging system.

Related terms

application

command

extensible markup language (XML)

hypertext transfer protocol (HTTP)

message

protocol

Single data type

In Actuate e.Report Designer and Actuate e.Report Designer Professional, an Actuate Basic data type that stores single-precision floating-point numbers, ranging in value from -1.797693134862315E308 to -2.23E-308 for negative values and from 2.23E-308 to 1.797693134862315E308 for positive values.

Related terms

Actuate Basic

data type

single inheritance

A relationship between classes in which a subclass inherits from only one superclass. The Java programming language supports single inheritance.

Related terms

class
inheritance
Java
subclass
superclass

Contrast with

multiple inheritance

slot

In Actuate e.Report Designer and Actuate e.Report Designer Professional, a visual target in the structure pane of the Design Editor that represents a component reference property. A slot indicates where a report designer can place a component.

**Related terms**

Actuate e.Report Designer
Actuate e.Report Designer Professional
component
component reference property
Design Editor
property

Contrast with

Component Editor

SmartSearch

See search.

SOAP

See simple object access protocol (SOAP).

sort

To specify the order of data. For example, customer names can be sorted in alphabetical order.

Related term

data

sort filter

A type of data filter that sorts data rows for another data adapter.

Related terms

data adapter
filter
data row

sort key

A list of one or more column names. The order of the column names in the sort key specifies the sort order of data rows. For example, a sort by State and Date is different from a sort by Date and State.

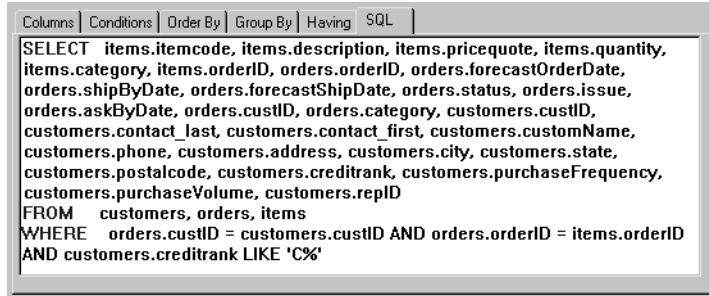

Related terms

column

sort

SQL page

A page in the Query Editor in Actuate e.Report Designer and Actuate e.Report Designer Professional that displays the SQL SELECT statement.

**Related terms**

page

Query Editor

SQL SELECT statement

SQL SELECT statement

One statement in SQL (Structured Query Language), a language commonly used for database applications. A SQL SELECT statement provides instructions about which data to query for a report.

Related terms

report

query

Actuate e.Report Designer Professional
SQL SELECT statement

Contrast with
Query Editor

three-dimensional range

In Actuate e.Spreadsheets Designer, a range that spans different worksheets. This range includes the same rows and columns on those multiple worksheets. The range must be within the same workbook.

Related terms

Actuate e.Spreadsheets Designer
column
range
row

tick

A mark that occurs at regular intervals along the x- or y-axis of a chart or a graph.

Related terms

chart
graph
tick interval

tick interval

1 In report design tools that create a detail graph, the distance between tick marks on the x-axis.

- 2 In report design tools that create a summary chart or graph, the type of category that is created.

The tick interval for the x-axis is specified by the TickInterval and TickIntervalUnit properties.

- 3 The distance between tick marks on the y-axis or overlay axis. The tick interval for the y-axis is specified by setting YLabelStyle to GraphIntervalLabels and YTickInterval to the appropriate value. The tick interval for the overlay axis is specified by setting YOverlayLabelStyle to GraphIntervalLabels and YOverlayTickInterval to the appropriate value.

Related terms

Actuate e.Spreadsheet Designer

graph

range

time series chart

value

time series chart

A type of chart in which the calculation of the x-axis labels is based upon the Range, RangeUnit, RoundTo, TickInterval, and TickIntervalUnit properties.

range

tick interval

toolbar

A bar containing various buttons that provides access to common tasks.

Different toolbars are available for different kinds of tasks. The following main

toolbar is from Actuate e.Report Designer and Actuate e.Report Designer Professional.

Main Toolbar

transient object

An object that performs specialized tasks during report generation. Transient objects exist while an Actuate Basic report generates, but are not saved to the report file and do not appear when the report is viewed or printed. For example, connections and data rows are transient objects.

Related term

object

Contrast with

express content

persistent object

report object instance (.roi) file

transient report

See express content.

translator

See converter

Transporter technology

See search extension

twip

A screen-independent unit of screen measurement equal to 1/20 of a printer’s point. There are approximately 1440 twips in a logical inch or 567 twips in a logical centimeter.

type

See data type and semantic type.

type declaration character

A character appended to a variable name to specify the variable’s data type.

Character	Data type
%	Integer
&	Long
!	Single
#	Double
@	Currency
\$	String

Related terms

data type
variable

Contrast with
